

- Exploding primers containing lead styphnate & the friction from the lead slug against the gun barrel create airborne lead.
- Spent bullets and settled dust can contaminate both indoor & outdoor ranges.
- Slugs hitting the bullet trap, walls, floors or ceiling of the range create lead dust.
- The process of removing spent bullets or the face of earthen bullet trap backstops can generate large quantities of lead dust.
- Airborne lead dust can concentrate in outdoor ranges, depending on weather conditions.
- Lead dust can collect on clothes during the day. When those clothes are worn home, the lead can contaminate shooters' cars and homes.

Are You Exposed to Lead?

- Target shooting at firing ranges
- Trap & skeet shooting
- Making lead shot & bullets

Exposure to lead dust and fumes at the firing range can present a potential health risk to shooters, firearms instructors, other range employees and their families.

Do You Know How to Protect Yourself?

- Make sure the range is correctly ventilated.
- At the range, wash hands & face before eating, drinking, or smoking.
- Wash hands & face before leaving the range.
- Wash range clothes separately from the rest of the family's clothes.
- Always load bullets in a ventilated area.
- Do not load bullets in the home or in areas where children frequent.
- Do not allow children into the bullet loading area
- Keep the bullet loading area clean.

**CLEAN-ALL
HEAVY METALS®
HAND & BODY SOAP**

**A Simple & Effective Way
to Stay Safe!**

Simply washing with ordinary soap & water will not significantly reduce the spread of contamination or the danger of ingestion. So **BE SAFE** by using **CLEAN-ALL HEAVY METALS® HAND & BODY SOAP** – The latest in soap technology, formulated to bond with lead residue so it simply rinses away. It is also an effective way to keep surfaces and laundry clean & safe.

Use Clean-All Soap after shooting or reloading to safely remove all lead residue!
